SUMMARY

Computer Science student with hands-on experience in Python-based ML libraries (NumPy, Pandas, scikit-learn), open-source development, and real-world software engineering. Currently a Google Summer of Code 2026 contributor at KDE Community with production-merged code in a live C++/Qt application.

EDUCATION

B.Tech in Computer Science Engineering — Bennett University, India Expected May 2027 | CGPA: 8.02/10.0

TECHNICAL SKILLS

ML & Data Science: Python, NumPy, Pandas, scikit-learn, Probability & Statistics, Linear Algebra

Programming Languages: C++, Python, SQL, Linux shell (bash)

Tools & Platforms: Git, GitHub, GitLab, Linux, CI/CD

Core Concepts: Machine Learning Fundamentals, DSA, OOP, SDLC, Version Control

EXPERIENCE

Google Summer of Code 2026 Contributor — KDE Community May 2026 – Aug 2026

Project: KeepSecret — Qt/QML & Kirigami-based Password Manager | Mentor: Marco Martin

- Selected as GSoC 2026 contributor at KDE Community from a global applicant pool via proposal and evaluation process.
- Shipping production-level C++ and QML code in a real open-source codebase — changes reviewed and merged via GitLab MR workflow.
- Implemented the ActionCollection keyboard-shortcut system using the KF6 KirigamiAppComponents library.
- Currently building a JSON/XML-based Import/Export feature with QML-exposed C++ backend using Q_INVOKABLE and QML_ELEMENT — a prerequisite for KWallet migration.
- Collaborated asynchronously with experienced KDE maintainers through code reviews and community channels.

GitLab: <https://invent.kde.org/roshani>

PROJECTS

Familiar Care — AI Pet Healthcare Web App [github/Roshani-97/Familiar-Care](https://github.com/Roshani-97/Familiar-Care)

- Built an AI-driven symptom analysis engine for pets using Python and ML classification, reducing owner uncertainty with data-backed health suggestions.
- Integrated digital health records, a species encyclopedia, and real-time consultation — deployed as a full-stack web application.

Shield Her — Women's Safety Application [github/Roshani-97/Women-Safety1](https://github.com/Roshani-97/Women-Safety1)

- Developed a real-time safety app with SOS alerts, GPS location sharing, and hands-free emergency triggers — focused on practical usability for end users.
- Implemented event-driven architecture to handle real-time responses with minimal latency.

ACHIEVEMENTS

- Active on LeetCode** (handle: Roshani_098) — Earn 100 days badge, consistent practice in DSA problems covering arrays, graphs, and dynamic programming.
- KDE Developer Account & Badge** — approved by KDE sysadmins; grants direct commit access to KDE's open-source codebase.
